- Cuttable at each LED (33mm)
  - Highly Stable & Reliable
  - Dimmable
  - True 50,000+ hour Lifetime
  - Power 10 Meters in a single run
- 3 Year Warranty

## Constant Current Single Colour LED Strip

One of the easiest and most effective ways to illuminate your home is to use LED Strip Lighting, it is flexible, can be cut to size and is available in a variety of colours and even colour changing.

Most LED Strip on the market is low grade and is a waste of time installing in the home, with as little as six months of use the LEDs can dim or fail, meaning it will need to be replaced, costing time and money.

In the last several years we have developed our own brand of Strip employing Constant Current Electronics. This is the correct way of powering LEDs for long term lifetime and reliability..

Our Strip Lighting is also bright enough to replace Fluorescent Tubes, and uses a fraction of the power.

Call us to discuss your requirements.
